A Cloud GuruSign In This was the most in-depth and comprehensive course. I am glad that the trainers came with exceptional industry experience and were patient enough to make each of us understand the concepts easily. The video quality was top-notch and was backed by experience and were patient enough to make each of us understand the concepts easily. The video quality was top-notch and was backed by experience and were patient enough to make each of us understand the concepts easily. queries at any time. I would strongly recommend their training. The program was so professionally created and completely in line with the exam curriculum. Thank you Intellipaat for offering such a wonderful course on AWS Certification training. Great training with experienced instructors. I am impressed by the fact that the course was really very well prepared and structured. I am really impressed and the training was also worth the price. Great trainer. In Spite of around 15 people in the session, he gave individual attention to everyone. He is professional, knowledgeable and probably the best. Keep up the good work. The instructors are a knowledgeable bunch, I must say. When trainers know the subject well, it becomes fun to learn. Overall, my experience was good and I was able to handle the tasks well. The trainers at Intellipaat are well experienced professionals and also explained the subject really well. The course comprises 70% practical and 30% theory which makes it the best. The instructor is very knowledgeable. She describes the course in detail. All presentations are good and the LMS is a great platform for revising. Lifetime access and 24\*7 support are the best part It was a great learning experience at Intellipaat. They have a very good set-up for conducting online classes and have recordings available. The assignments & quizzes provide hands-on learning. The training was completely oriented towards practical sessions. E-classes were very effective. Each module was explained step-by-step with in-depth knowledge. I am really happy with the learning. The AWS Certified Solutions Architect Associate SAA-C03 exam, or SAA for short, is one of the most sought-after certifications in the Cloud industry today. This certification verifies your knowledge of the AWS Cloud and your know-how in building a well-architected infrastructure in AWS. This AWS Certification exam helps companies identify and develop their in-house talent in implementing cloud initiatives. Achieving the latest version of the AWS Certified Solutions Architect – Associate SAA-C03 certification validates one's ability to design and implement various solutions on AWS, such as distributed architecture, serverless, containerized applications, and the like. As a Solutions Architect, it is your responsibility to be well-versed with the different tools and services in order to satisfy your customer requirements. You should also know to design a secure, resilient, high-performing and cost-optimized cloud architectures using the available cloud architectures that you can design which perfectly suit a particular client use case. The challenge is to acquire the necessary design principles in the AWS Cloud and its best practices to avoid ending up with inefficient implementations that cost more than they should. The AWS Certified Solutions Architect – Associate SAA-C03 exam will be based on these topics. for people who perform in a solutions architect role, but any IT Professional can take this. College students who want to get ahead of their peers can also take this test. The SAA-C03 exam validates your ability to use various Amazon Web Services (AWS) technologies to design solutions based on the AWS Well-Architected Framework. If you are interested in taking the AWS Certified Solutions Architect - Associate SAA-C03 exam soon, you must prepare first by studying the core cloud concepts and design principles in AWS. Pay close attention on how you can properly secure your cloud architecture as this exam constitutes a lot of security-related scenarios. Take note that the SAA-C03 exam also validates a candidate's ability to complete the following tasks: Design solutions that incorporate AWS services to meet current business requirements and future projected needs Design architectures that are secure, resilient, high-performing, and cost-optimized Review existing solutions and determine improvements The official AWS Exam Guide, AWS Documentation, and AWS Whitepapers will be your primary study materials for this exam. Experience in building systems will also be helpful since the exam constitutes of multiple scenario-type questions. You can learn more details on your exam through the official AWS Certified Solutions Architect – Associate SAA-C03 Exam Guide here. Do a quick read on it to be aware of how to prepare and what to expect on the exam itself. Difference between the SAA-C02 and SAA-C03 AWS Certified Solutions Architect Associate Exam VersionsBefore you start preparing for the exam, you have to know the exact knowledge areas and topics that you should focus on. It is also beneficial for you to learn the differences between the previous SAA-C02 version and the new SAA-C03 are virtually the same. As you can see in the diagram below, the new SAA-C03 exam has retained the Design Resilient Architectures, Design High-Performing Architectures, and Design Cost-Optimized Architectures exam domain sfrom the previous one. However, the existing Design Secure Applications and Architectures exam domain was renamed to Design Secure Applications one. AWS Certified Solutions Architect Associate exam was focused on the topic of resiliency since the Design Resilient Architectures exam domain has the largest exam coverage percentage; compromising 30% of the exam compared with other domains. This time, the new AWS Certified Solutions Architect Associate SAA-c03 exam version has put a spotlight on security. Its biggest exam domain is Design Secure Architecture (30%) so you have to focus on the various security features available on each related AWS service. The AWS Certified Solutions Architect Associate SAA-C03 Study MaterialsAs a starting point for your AWS Certified Solutions Architect Associate exam studies, we recommend taking the FREE AWS Cloud knowledge by covering different AWS Cloud concepts, AWS services, security, architecture, pricing, and support plans. If you are quite new to AWS, taking and completing this digital course should be your first step for your SAA-C03 exam prep. Building Fault-Tolerant Applications on AWS: This paper discusses the many ways you can ensure your applications are fault-tolerant in AWS. It also contains multiple scenarios where the practices are applied and which AWS services to Focus On for the SAA-C03 ExamEC2 - As the most fundamental compute service offered by AWS, you should know about EC2 inside out.Lambda - Lambda is the common service used for serverless applications. Study how it is integrated with other AWS services to build a full-stack serverless app. Elastic Load Balancer – Load balancing is very important for a highly available system. Study the different types of ELBs, and the features each of them supports. Auto Scaling – Study what services in AWS can be auto-scaled, what triggers scaling, and how auto scaling increases/decreases the number of instances. Elastic Block Store - As the primary storage solution of EC2, study on the types of S3 storage depending on your needs. Study what these types are and what differs between them. Also review on the capabilities of S3 such as hosting a static website, securing access to objects using policies, lifecycle policies, etc. Learn as much about S3 as you can. Storage Gateway - There are occasional questions about Storage Gateway in the exam. You should understand when and which type of Storage Gateway should be used compared to using services like S3 or EBS. You should also know the use cases and differences between DataSync and Storage Gateway. EFS – EFS is a service highly associated with EC2, much like EBS. Understand when to use EFS, compared to using S3, EBS or instance store. Exam questions involving EFS usually ask the trade off between cost and efficiency of the service compared to other storage services.RDS / Aurora – Know how each RDS database differs from one another, and how they are different from Aurora. Determine what makes Aurora unique, and when it should be preferred from other databases (in terms of function, speed, cost, etc). Learn about parameter groups, option groups, option groups, and subnet groups. DynamoDB – The exam includes lots of DynamoDB questions, so read as much about this service as you can. Consider how DynamoDB compares to RDS, Elasticache and Redshift. This service is also commonly used for serverless applications along with Lambda. Elasticache and Redshift. Familiarize yourself with Elasticache redis and its functions. Determine the areas/services where you can place a caching mechanism to improve data throughput, such as managing session state of an ELB, optimizing RDS instances, etc. VPC/NACL/Security Groups – Study every service that is used to create a VPC (subnets, route tables, internet gateways, nat gateways, VPN gateways, etc). Also, review on the differences of network access control lists and security groups, and during which situations they are applied. Route 53 – Study the different types of records in Route 53. Study also the different routing policies. Know what hosted zones and domains are. IAM – Services such as IAM Users, Groups, Policies and Roles are the most important to learn. Study how IAM integrates with other services and how it secures your application through different policies. Also read on the best practices when using IAM.CloudWatch - Study how monitoring is done in AWS and what types of metrics are sent to CloudWatch. Also read upon Cloudwatch Logs, CloudWatch Alarms, and the custom metrics made available with CloudWatch Agent. CloudWatch Logs. Kinesis – Read about Kinesis sharding and Kinesis Data Streams. Have a high level understanding of how each type of Kinesis Stream works. CloudFront - Study how CloudFront helps speed up websites. Know what content sources CloudFront can serve from. Also, check the kinds of certificates CloudFront accepts. SQS - Gather info on why SQS is helpful in decoupling systems. Study how messages in the queues are being managed (standard queues, FIFO queues, dead letter queues). Know the differences between SQS, SNS, SES, and Amazon MQ.SNS - Study the function of SNS notifications. SWF / CloudFormation / OpsWorks - Study how these services function. Differentiate the capabilities and use cases of each of them. Have a high-level understanding of the kinds of scenarios they are usually used in. Other SAA-C03 AWS Services that you should also know the following services:... plus a few more services and new SAA-C03 topics that we have recently added to our AWS Certified Solutions Architect Associate Practice Exams For more information, check out the SAA-C02 official exam guide for the new SAA-C03 version here. Based on our exam experience, you should also know when to use the following: The AWS Documentation and FAQs will be your primary source of information. You can also visit Tutorials Dojo's AWS Cheat Sheets to gain access to a repository of thorough content on the different AWS services mentioned above. Lastly, try out these services yourself by signing up in AWS and performing some lab exercises. Experiencing them on your own will help you greatly in remembering what each service is capable of.Also check out this article: Top 5 FREE AWS Review Materials. Common Exam Scenarios for the SAA-C03 exam ScenarioSolutionDomain 1: Design Resilient ArchitecturesSet up asynchronous data replication to another RDS DB instance hosted in another RDS DB instance ho replication across Availability Zones with automatic failover in Amazon RDS. Enable Multi-AZ deployment in Amazon Database. Monitor database metrics and send email notifications if a specific threshold has been breached. Create an SNS topic and add the topic in the CloudWatch alarm. Set up a DNS failover to a static website. Use Route 53 with the failover option to a static same to a stati EBS Volumes.Use Amazon Data Lifecycle Manager to automate the creation of EBS snapshots.Monitor the available swap space of your EC2 instancesInstall the CloudWatch agent and monitor the SwapUtilizationmetric.Implement a 90-day backup retention policy on Amazon Aurora.Use AWS BackupDomain 2: Design High-Performing ArchitecturesImplement a fanout messaging. Create an SNS topic with a message filtering policy and configure multiple SQS queues to subscribe to the topic. A database that has a read replication latency of less than 1 second. Use Amazon Aurora with cross-region replicas. A specific type of Elastic Load Balancer that uses UDP as the protocol for communication between clients and thousands of game servers around the world. Use Network Load Balancer for TCP/UDP protocols. Monitor the memory and disk space utilization of an EC2 instance. Install Amazon CloudWatch agent on the instance. Retrieve a subset of data from a large CSV file stored in the S3 bucket. Perform an S3 Select operation based on the bucket's name and object's key. Upload 1 TB file to an S3 bucket. Use Amazon S3 multipart upload API to upload large objects in parts. Improve the performance of the application by reducing the response times from milliseconds to microseconds. Use Amazon DynamoDB Accelerator (DAX) Retrieve the instance ID, public keys, and public IP address of an EC2 instance. Access the URL: using the EC2 instance. Route 53 Geolocation Routing policy. Domain 3: Design Secure Applications and Architectures Encrypt EBS volumes restored from the unencrypted EBS snapshots Copy the snapshot and enable encryption with a new symmetric CMK while creating an EBS volume using the snapshot. Limit the maximum number of requests from a single IP address. Create a bucket policy that requires users to set the object's ACL to bucket-owner-full-control. Protect objects in the S3 bucket from accidental deletion or overwrite. Enable versioning and MFA delete. Access resources on both on-premises credentials that are stored in Active Directory. Set up SAML 2.0-Based Federation by using a Microsoft Active Directory Federation Service. Secure the sensitive data stored in EBS volumes Enable EBS EncryptionEnsure that the data-in-transit and data-at-rest of the Amazon S3 bucket is always encryptedEnable Amazon S3 bucket is always encryptedEnable EBS EncryptionEnsure that the data-in-transit and data-at-rest of the Amazon S3 bucket is always encryptedEnable EBS EncryptionEnsure that the data-in-transit and data-at-rest of the Amazon S3 bucket is always encryptedEnable Amazon S3 bucket is always encryptedEnable EBS EncryptionEnsure that the data-in-transit and data-at-rest of the Amazon S3 bucket is always encryptedEnable EBS EncryptionEnsure that the data-in-transit and data-at-rest of the Amazon S3 bucket is always encryptedEnable EBS EncryptionEnsure that the data-in-transit and data-at-rest of the Amazon S3 bucket is always encryptedEnable EBS EncryptionEnsure that the data-in-transit and data-at-rest of the Amazon S3 bucket is always encryptedEnable EBS EncryptionEnsure that the data-in-transit and data-at-rest of the Amazon S3 bucket is always encryptedEnable EBS EncryptionEnsure that the data-in-transit and data-at-rest of the Amazon S3 bucket is always encryptedEnable EBS EncryptionEnsure that the data-in-transit and data-at-rest of the Amazon S3 bucket is always encryptedEnable EBS EncryptionEnsure that the data-in-transit and data-at-rest of the Amazon S3 bucket is always encrypted Enable EBS EncryptionEnsure that the data-at-rest of the Amazon S3 bucket is always encrypted Ensure that the data-at-rest of the Amazon S3 bucket is always encrypted Ensure that the data-at-rest of the Amazon S3 bucket is always encrypted Ensure that the data-at-rest of the Amazon S3 bucket is always encrypted Ensure that the data-at-rest of the Amazon S3 bucket is always encrypted Ensure that the data-at-rest of the Amazon S3 bucket is always encrypted Ensure that the data-at-rest of the Amazon S3 bucket is always encrypted Ensure that the data-at-rest of the Amazon S4 bucket is always encrypted Ensure that the data-at-rest of the Amazon S4 bucket i Certificate Manager to generate an SSL certificate. Associate the certificate to the CloudFront distribution and enable Server Name Indication (SNI). Control the access for several S3 buckets. Enforce strict compliance by tracking all the configuration changes made to any AWS services. Set up a rule in AWS config to identify compliant and non-compliant services. Provide short-lived access to AWS resources. Use AWS Security Token Service and rotate all the database credentials, API keys, and other secrets on a regular basis. Use AWS Secrets Manager and enable automatic rotation of credentials. Domain 4: Design Cost-Optimized Architectures A cost-effective solution for over-provisioning of resources. Configure a target tracking scaling in ASG. The application data is stored in a tape backup solution. The backup data must be preserved for up to 10 years. Use AWS Storage Gateway to backup the data directly to Amazon S3 Glacier Deep Archive as the destination. Globally deliver the static contents and media files to customers around the world with low latency. Store the files in Amazon S3 and create a CloudFront distribution. Select the S3 bucket as the origin. An application must be hosted to two EC2 instances and predictable. Deploy the application to a Reserved instance.Implement a cost-effective solution for S3 objects that are accessed less frequently. Create an Amazon S3 lifecyle policy to move the objects to Amazon S3 lifecyle policy to move the objects to Amazon S3 lifecyle policy to move the objects to Amazon S3 standard-IA. Minimize the data transfer costs between two EC2 instances. Deploy the EC2 instances in the same Region. Import the SSL/TLS certificate of the application. Import the certificate into AWS Certificate Manager or upload it to AWS IAM.AWS Certified Solutions Architect Associate video Course for the SAA-C03 exam. Here is a sneak peek of our video course introduction: Validate your Knowledge through sample exams. You can take this practice exam from AWS for free as additional material, but do not expect your real exam to be on the same level of difficulty as this practice exam on the AWS website. Tutorials Dojo offers a very useful and well-reviewed set of practice tests for AWS Solutions Architect Associate SAA-C03 takers here. The practice test has over 390 unique questions and each question comes with detailed explanations, reference links, and cheat sheets. You can also pair our practice exams with our video course and exam preparations. If you have scored well on the Tutorials Dojo AWS Certified Solutions Architect Associate SAA-C03 practice tests and you think you are ready, then go earn your certification! If you think you are lacking in certain areas, better review them again and take note of any hints in the questions Caling group of EC2 instances behind an Application Load Balancer. The Solutions Architect noticed that the website is receiving a large number of illegitimate external requests from multiple systems with IP addresses that constantly change. To resolve the performance issues, the Solutions Architect must implement a solution that would block the illegitimate requests with minimal impact on legitimate traffic. Which of the following options fulfills this requirement? Create a regular rule in AWS WAF and associate the web ACL to an Application Load Balancer. Create a custom network ACL and associate the web ACL to an Application Load Balancer. Balancer, Create a custom rule in the security group of the Application Load Balancer (ALB), Amazon API Gateway, and AWS AppSync – services that AWS customers commonly use to deliver content for their websites and applications. When you use AWS WAF on Amazon CloudFront, your rules run in all AWS Edge Locations, located around the world close to your end-users. This means security doesn't come at the expense of performance. Blocked requests are stopped before they reach your web servers. When you use AWS WAF on regional services, such as Application Load Balancer, Amazon API Gateway, and AWS AppSync, your rules run in the region and can be used to protect Internet-facing resources as well as internal resources. A rate-based rule tracks the rate of reguests for each originating IP address and triggers the rule action on IPs with rates that go over a limit. You set the limit as the number of requests per 5-minute time span. You can use this type of rule to put a temporary block on requests from the illegitimate requests without affecting the genuine requests. To accomplish this requirement, you can use AWS WAF web ACL. There are two types of rules in creating your own web ACL rule: regular and rate-based rules. You need to select the latter to add a rate limit to your web ACL. After creating the web ACL, you can associate it with ALB. When the rule action triggers, AWS WAF applies the action to additional requests from the IP address until the request rate falls below the limit. Hence, the correct answer is: Create a regular rule in AWS WAF and associate the web ACL to an Application Load Balancer is incorrect because a regular rule only matches the statement defined in the rule. If you need to add a rate limit to your rule, you should create a custom network ACL and associate it with the subnet of the Application Load Balancer to block the offending requests is incorrect. Although NACLs can help you block incoming traffic, this option wouldn't be able to limit the number of requests from a single IP address that is dynamically changing. The option that says: Create a custom rule in the security group can only allow incoming traffic. Remember that you can't deny traffic using security groups. In addition, it is not capable of limiting the rate of traffic to your application unlike AWS WAF. References: out this AWS WAF. References: out this AWS WAF. Cold storage refers to the storage that keeps rarely accessed data (cold data). In terms of pricing, the colder the data, the cheaper it is to access when needed. Amazon FSx For Lustre is a high-performance file system for fast processing of workloads. Lustre is a popular open-source parallel file system which stores data across multiple network file servers to maximize performance and reduce bottlenecks. Amazon FSx for Windows File Server is a fully managed Microsoft Windows File Server is a full with the full server is a full with Elastic File System is a fully-managed file storage service that makes it easy to set up and scale file storage service that offers industry-leading scalability, data availability, data availability, security, and performance. S3 offers different use cases (frequently accessed data, infrequently accessed data, and rarely accessed data). The question has two requirements: High-performance, parallel hot storage to process the training datasets concurrently. Cost-effective cold storage to keep the archived datasets that are accessed infrequently. In this case, we can use Amazon FSx For Lustre for the first requirement, as it provides a highperformance, parallel file system for hot data. On the second requirement, we can use Amazon S3 for storing cold data. Amazon S3 for hot and cold storage respectively. Using Amazon FSx For Lustre and Amazon EBS Provisioned IOPS SSD (io1) volumes are designed for storing hot data (data that are frequently accessed) used in I/O-intensive workloads. EBS has a storage option called "Cold HDD," but due to its price, it is not ideal for data archiving. EBS Cold HDD is much more expensive than Amazon S3 Glacier / Glacier Deep Archive and is often utilized in applications where sequential cold data is read less frequently. Using Amazon S3 for hot and cold storage respectively is incorrect. Although EFS supports concurrent access to data, it does not have the high-performance ability that is required for machine learning workloads. Perfect 10/10 material. The best \$14 I've ever spent! Given the enormous number of students and therefore the business success of Jon's courses, I was pleasantly surprised to see that Jon personally responds to many, including often the more technical questions from his students within the forums, showing that when Jon states that teaching is his true passion, he walks, not just talks the talk. I much respect and thank Jon Bonso. The explanation to the questions are awesome. Lots of gap exposed in my learning. I used the practice tests along with the TD cheat sheets as my main study materials. This is a must training resource for the exam. Using the practice exam helped me to pass. I think I wouldn't have passed if not for Jon's practice sets. I also tried other courses but only Tutorials Dojo was able to give me enough knowledge of Amazon Web Services. My favorite part of this course is explaining the correct and wrong answers as it provides a deep understanding in AWS Cloud Platform.
